

HVAC GUIDE FOR HOUSES OF WORSHIP

For nearly 100 years, AFGO Mechanical has offered the comprehensive commercial HVAC services that New York City's houses of worship trust. Specializing in heating and cooling services for churches, mosques, synagogues, and other congregation spaces, there's no better team for your comfort needs than AFGO.

HVAC Design Considerations for Houses of Worship

At AFGO Mechanical, our team understands that you want your congregation to feel welcome when they walk in the front door, and your HVAC system plays a significant role in the environment of your worship space.

If you currently struggle with a space that is too warm or cold or an HVAC system that is too loud, we'll carefully design a solution that meets your unique needs. Such special considerations may include:

- **Zoned comfort solutions:** Keep your congregation comfortable by increasing the temperature in large drafty spaces while lowering it in stuffy, smaller rooms.
- **Quiet operation:** Our team will help select systems that operate as quietly as possible to ensure minimal disturbance during worship services.
- **Precise temperature control:** Adjust temperatures based on when parishioners use the building with help from our smart thermostat integrations.

Restore Comfort to Your House of Worship With Emergency HVAC Repair

If your HVAC system fails, your worship space can quickly become cramped, making sustaining services difficult. AFGO Mechanical offers emergency HVAC repair throughout the NYC region and our highly qualified technicians use innovative thinking and sophisticated technology to rapidly resolve even the most complex heating and cooling issues, including:

- Strange noises
- Burning or gaseous odors
- Sudden system failures
- Frequent short-cycling
- Inaccurate thermostat readings
- Insufficient heating or cooling

No matter what time of day or night your emergency occurs, our commercial heating and cooling specialists will be there to resolve the problem in no time, and we will do everything we can to restore your HVAC system before your next service.

Improve the Efficiency of Your House of Worship With HVAC Replacement & Retrofitting

Our commercial HVAC services are critical for sustaining the operations and comfort of your house of worship while maximizing system efficiency — especially when buildings aren't in use. We understand that congregations have unique budget considerations, which is why we will work closely with you to determine the most cost-effective HVAC retrofitting solution available.

If you have an older building that requires an HVAC system upgrade to meet your comfort needs, our team can provide a high-quality replacement to achieve total comfort.

Protect Your House of Worship With Preventative HVAC Maintenance

Routine maintenance is the best way to protect your heating and air conditioning equipment from premature failure. AFGO Mechanical creates customized preventative HVAC maintenance plans to suit your congregation's unique heating and cooling needs. Our sophisticated reporting systems help us actively perform ongoing maintenance to prevent unexpected breakdowns, premature replacements, and expensive emergency HVAC repairs.

Trust Only the Best for HVAC Services for Your House of Worship

Specializing in providing comfort solutions for houses of worship, the team at AFGO has a deep understanding of what churches, mosques, and synagogues require from their HVAC systems. We are proud of our reputation as a third-generation, family-owned and -operated company and honored to serve faith-based communities in the Manhattan area.
